Material	HDPE Reinforcing Weave
Adhesive	Strong, Water and UV Resistant
Durability	Tested up to 5 years*
Application	Indoor and Outdoor use

*Based on accelerated weathering and adhesion testing. Real life performance may vary depending on conditions

PROVEN PERFORMANCE

Creates a strong, watertight seal that helps prevent further damage and extends the life of your materials.

HOW TO USE

1 PREPARE

Remove the item from the water and lay the damaged area on a flat surface

Clean both sides of the repair with isopropanol. Dry thoroughly.

2 MEASURE & CUT

Measure the length of the tear, cut or split.

Cut a piece of DiaMend Repair Tape slightly larger than the damage area.

3 APPLY

Align the tape so the damage is in the centre.

Peel back the protective paper gradually and apply the tape, pressing firmly as you go to remove air bubbles.

4 FINISH

Smooth down the edges.

For tears that reach the edge, wrap the tape over the edge and onto the underside for a stronger seal.

Repair with confidence.
